

ISO 50001 conformance

Energy management System (EnMS) Documents

If you appreciate the content of ISO 50001, then you come to realize that...

ISO 50001 is not at all particular about the "certification".

ISO 50001 is particular about "Improving your energy performance"

It strongly recommends to take the essence rather than formality.

So, what is the "essence"?

It is to ensure adding value to your business and its sustainability by improving energy performance in your operation.

So then, exactly what is ISO 50001 requiring?

Nothing. It is to promote the mission that each organization has: "Sustainable business development" through achieving the energy performance improvement objectives and targets, as a result of implementing the energy management system in line with the business operation. This is ISO 50001's aim and hope.

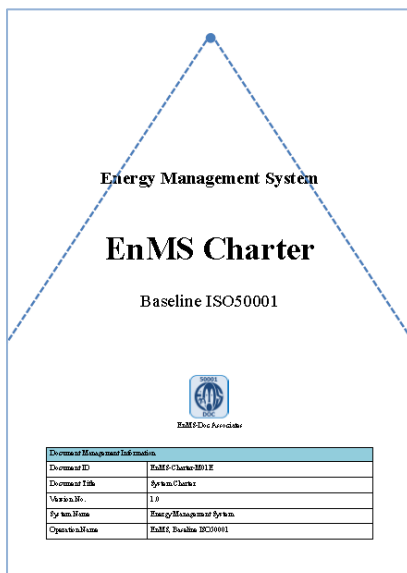

So then, how do you proceed with the ISO 50001 EnMS operation?

Top management must lead, appointing influential management representative "person responsible for energy management (PRF) or EnMS champion", to run an aggressive EnMS operation with all people involved under the effective EnMS structure.

However, the operation requiring all people's involvement with a proper teamwork requires adequate documentation to ensure people sharing common information and knowledge.

In EnMS operation, without proper documents, actions are vulnerable.

Did you know there is such a handy document at your service?

- It is ready to use ISO 50001 compatible charter document for EnMS operation.
- "PRF (EnMS Champion)" is the document author.
- The document is written around an actual business entity thus powerful in reality.
- It an ideal reference document in structuring and establishing ISO 50001 EnMS operation.
- It is provided in the "word-format" so that you can creatively add, delete, revise and alter to your organization specifics to come up with your own charter document that is much more superior than the original one.
- And provided that the document structure is maintained, you are always ready for ISO 50001.

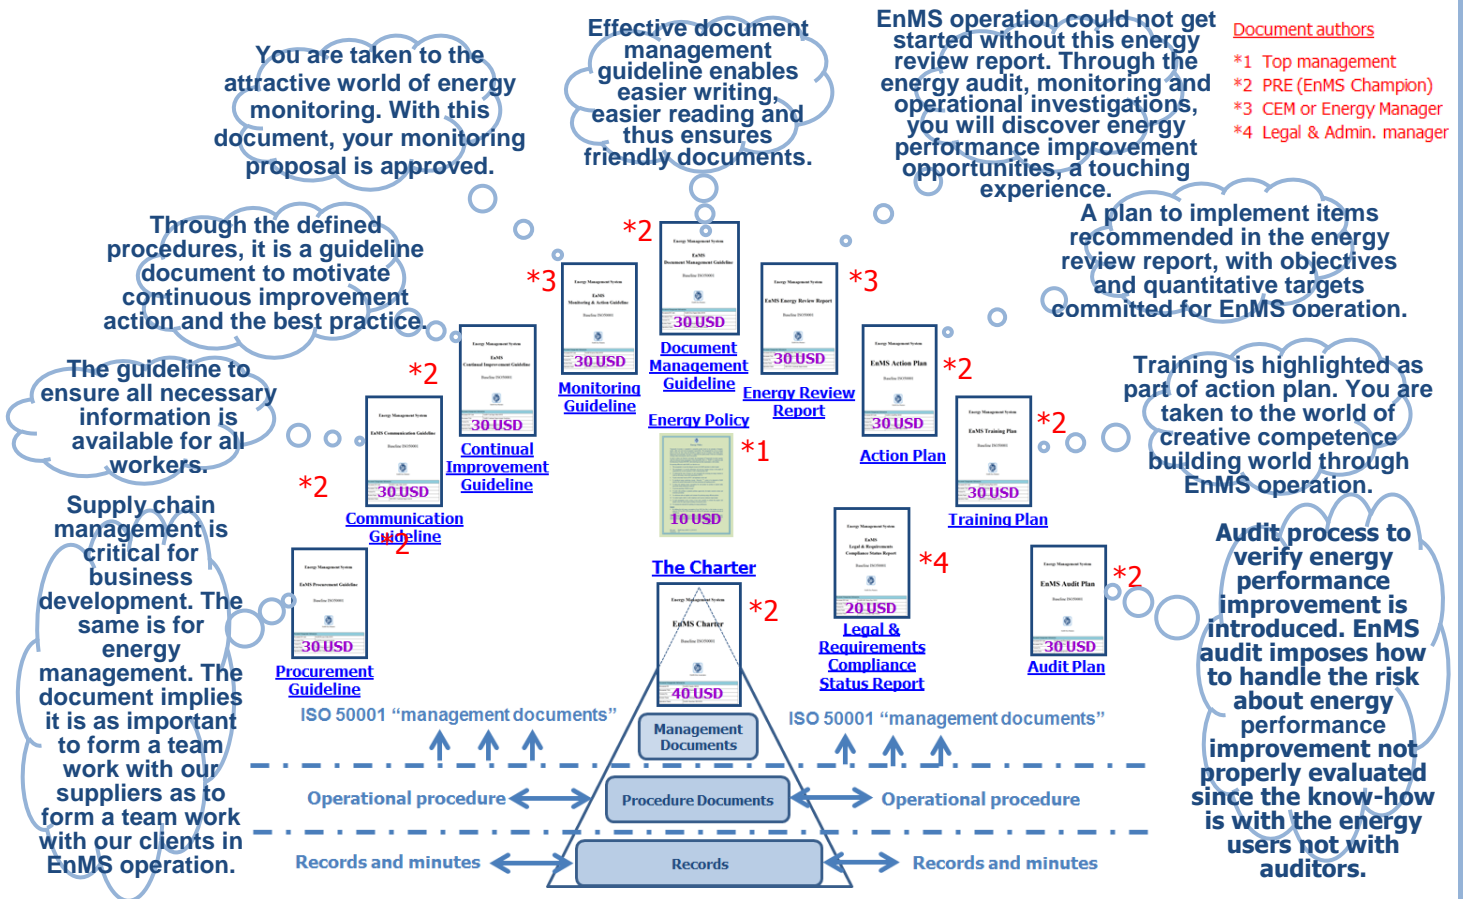

12 Key documents essential for ISO 50001 compatible EnMS operation

The 12 key documents offered are made based on an actual business entity and so it is powerful and real. At the same time, the contents are flexible in the nature that can be applied to any industry, factory and commercial building.

Voice from document owners:

Reading the documents, I realize that there are no equal documents among university books. I've found documents about Energy Management but are all too generic or too technical. Your documents are exactly in the middle...
Luca. universitv graduate. Italy

We have documents also in Japanese.

There are many ISO 50001 related documents in the market but I think your document providing solution for energy users in creating document for EnMS activities complying to ISO 50001 and the local regulations is the first in Japan. Mr. K.I. Company I, PRE
